

DENTAL PROPHYLAXIS AUTHORIZATION

ALL PETS MEDICINE, SURGERY & REHABILITATION CLINIC
MAPLETON, MN 56065 507-524-3748

This is a big day for your Pet!!

It is our goal to make you and your pets' experience as smooth and comfortable as possible. By carefully filling out the information on both sides of this sheet, you will help us give exactly the level of care that your pet deserves.

Remember, our staff wants to help with any questions that you might have!

Owner's Name: _____ Pet's Name: _____ Pet age: _____

Phone number(s) where you **WILL BE AVAILABLE** on the date of your pet's procedure: _____

How would you like us to communicate with you after surgery? Text OR Phone call

Is your pet currently taking any medications? If yes, what medications and when was last dose?

Today, your pet is scheduled to have a dental prophy performed. He/she will be undergoing general anesthesia for this procedure and if 4 years or older will have an IV catheter placed in one of his/her front legs for support under anesthesia. (You'll notice the small shaved area when he/she goes home later today.) After the cleaning, polishing, and probing are complete, dental radiographs will be performed to evaluate the roots of potentially problematic teeth. We will also provide a pain medication injection and two days of oral pain medication if necessary. The IV fluids, radiographs, and pain management are included in the price of the dental prophy and thus will not incur any additional expense for these services.

Yes No

_____ I give the doctor permission to extract teeth during dental cleaning if deemed necessary.

If extractions exceed \$250.00, we will contact you at phone number listed above – Please note: If we are unable to reach you, and you do not respond within 10 minutes of our initial contact, we will proceed with any approved extractions up to the amount listed above and recover your pet from anesthesia. Any additional extractions beyond the amount listed above will require another appointment for anesthetic extractions.

Pre-Anesthetic blood screen Like you, our greatest concern is the well-being of your pet. Before any anesthetic procedure your pet will receive a comprehensive physical exam. However, there are many conditions, including disorders of the kidneys, liver, or blood, which cannot be detected by physical exam alone. Pre-anesthetic blood work provides the doctor with more information on your pet's overall health, and that information aids in making anesthetic decisions. We are able to complete these tests in house and have results in minutes. This screen will be performed today to check for potential issues listed above and also provides baseline values for future reference.

Fleas: It is important to keep our patients free of external parasites such as fleas and ticks. If your pet is diagnosed as having fleas or ticks while in the care of All Pets Medicine, Surgery, and Rehabilitation Clinic, your pet will be treated at an additional cost. **INITIALS:** _____

***PLEASE FINISH ON BACK OF SHEET* ☺**
